Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.

DETAILED ACTION

Specification

1. The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.
2. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

The following title is suggested: Portable Engine Generator System With Frame Secured Heat Shield Plate Between The Exhaust Muffler And The Fuel Tank.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless —

(e) the invention was described in—

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or

(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

4. Claim 1 is rejected under 35 U.S.C. 102(e) as being anticipated by U.S. Patent No. 6,084,313 A to Frank.

Frank clearly teaches the construction of a generator system with vertically shafted engine comprising:

a heat shield plate (50c) secured to a frame (14) and extending vertically to divide the inside of said frame into a generator area and an engine area;

a generator (26) having a portion passed through a lower portion of said heat shield plate to protrude into said engine area;

a fuel tank (18) disposed above said generator;

a control box (30a) disposed sideways of said generator;

said generator, fuel tank and control box being mounted on said frame;

an engine (16) mounted on said frame in said engine area for driving said generator; and

an exhaust muffler (50b) of said engine, the exhaust muffler being disposed above the portion of said generator disposed in said engine area and in such a manner that an upper portion of said heat shield plate is interposed between said exhaust muffler and said fuel tank, wherein the engine generator system further includes:

a battery (B) which is mounted on a battery base fixed to said frame and which is disposed sideways of the portion of said generator disposed in said engine area and in such a manner that a lower portion of said heat shield plate is interposed between said battery and said control box,

a battery cover (30b) which is fastened to said heat shield plate and to said battery base at a location displaced sideways from said battery on the side opposite from said heat shield plate and which partitions off said battery and said exhaust muffler from each other,

said battery cover is provided with a pair of through-bores individually corresponding to plus and minus terminals of said battery, and a pair of harnesses

passed through grommets mounted in said through-bores and connected to said plus and minus terminals, respectively.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See PTO-892.
